

System & Automation - Recruiter Quick View

Fast index of Linux, Python, Bash, SQL, testing, and security-operations evidence

Artifact	Skills demonstrated	Reproducible evidence
Linux Hardening Assessment	SSH, accounts, firewall, services, logging, patching, validation	Assessment PDF + Bash audit output
File Permissions	chmod, chown, ownership, groups, least privilege	Completed permission scenarios
IP Allow-List Automation	Python, IPv4 validation, CIDR logic, logging, dry-run	Script + inputs + JSON/log/output + test
Bash Security Audit	Shell scripting, host evidence collection, safe read-only checks	linux_security_audit.sh + report
SQL Security Analysis	SQL filtering, aggregation, incident-window analysis	SQL + CSV + SQLite DB + results
Python Log Parser	CSV parsing, time windows, simple detection automation	Script + dataset + JSON alerts
Testing & Error Handling	Validation, deterministic behavior, failure safety	Test script + execution result
Hardening Checklist	Operational security review and closure evidence	Completed checklist
Automation Runbook	Change safety, review, rollback, maintenance	Operational runbook

Target Role Alignment

- **Cybersecurity Analyst:** Linux security, scripting, access control, log analysis, and documented remediation.
- **Security Operations Analyst:** Automation, SQL investigations, host review, logging, and repeatable runbooks.
- **SOC Analyst I:** SQL/Python log analysis and alert-generation concepts complement SIEM triage.
- **Junior Security Automation Analyst:** Python/Bash scripting, tests, logs, safe execution, and reproducible artifacts.
- **Cloud / Systems Security:** Linux hardening, least privilege, network exposure, automation, and validation.

Portfolio Integrity

- All datasets, outputs, users, hosts, and security scenarios are synthetic portfolio material.
- No unsupported productivity percentage is claimed.
- Scripts are included so recruiters can review the actual logic rather than only a PDF description.
- Automation is deliberately scoped as lab/security-operations tooling, not production engineering experience.
