

Executive Security Metrics Dashboard

Illustrative KPI scorecard for simulated program management

Domain	KPI	Baseline	90-day target	Status logic
Risk	Critical risks without active treatment	3	0	Red if >0
Vulnerability	Internet-facing critical findings past SLA	4	0	Red if >0
IAM	Privileged MFA coverage	72%	100%	Green at 100%
IAM	Quarterly privileged access review completion	55%	100%	Green >=95%
Monitoring	P1 log-source coverage	40%	100%	Green >=95%
SOC	High alerts acknowledged within 10 min	68%	>=95%	Green >=95%
SOC	Detection false-positive rate	38%	<20%	Green <20%
IR	High-severity incidents with complete timeline/handoff	60%	>=95%	Green >=95%
Recovery	Critical-system restore tests completed	25%	100%	Green at 100%
Vendor	High-risk vendors with current security review	50%	100%	Green >=95%

Executive Interpretation

- Metrics are simulated case-study values used to demonstrate how program progress could be reported.
- Targets focus on risk reduction and operating-control evidence rather than activity volume alone.
- A metric is only useful when an owner, source, review cadence, and corrective action are defined.
