

Capstone Integration - Recruiter Quick View

Flagship case study connecting GRC, SOC, incident response, vulnerability management, IAM, automation, and executive reporting

Artifact	What it demonstrates
Executive Program Overview	Business-risk translation, program objectives, prioritized security outcomes
Risk & Control Summary	Inherent/residual risk, control ownership, remediation, validation
Architecture & Data Flow	Trust boundaries, identity, cloud/app/data paths, logging, recovery
SOC Detection Plan	Log-source priorities, ATT&CK-aligned; detections, SOC KPIs
Incident Response Model	Severity, RACI, lifecycle, communications and evidence handling
Vulnerability Program	Asset ownership, SLAs, exceptions, retesting and metrics
IAM Plan	MFA, RBAC, JML, privileged access, service accounts, vendor access
Compliance Crosswalk	NIST, ISO, SOC 2, PCI DSS, GDPR control alignment
30/60/90 Roadmap	Sequenced implementation, owners, dependencies, success criteria
Executive Metrics	Risk, SOC, vulnerability, IAM, recovery, and vendor KPIs
Maturity Review	Current/target capability maturity and next-stage improvements

Target Role Alignment

- **Cybersecurity Analyst:** Excellent alignment - integrates technical controls, risk, monitoring, incident response, and reporting.
- **Information Security Analyst:** Excellent alignment - control ownership, IAM, vulnerability, risk, and governance.
- **Security Operations Analyst:** Strong alignment - SIEM, detections, incident handling, metrics, and recovery dependencies.
- **GRC / IT Risk Analyst:** Strong alignment - risk register, crosswalk, evidence, treatment, residual risk, and roadmap.
- **Junior Security Program Analyst:** Excellent alignment - cross-functional roadmap, metrics, RACI, and maturity planning.

Portfolio Integrity

- All business facts, metrics, incidents, users, hosts, risk values, and target percentages are simulated case-study data.
- The project does not claim formal SOC 2, PCI DSS, ISO, GDPR, or NIST certification/compliance.
- Frameworks are used to organize security analysis and control readiness.
- Outcomes are described as program targets or simulated results rather than employer achievements.
